

Twister Evo II

More power for your bike

Twister Evo II is a fuel additive intended for those who seek an increased motorcycles performance without compromising its integrity. Thanks to its oxygenating properties and high caloric value, it's able to increase the power output of the engine while reducing its operating temperature, with great benefits to both reliability and engine lifetime.

Twister Evo II greatly improves both torque and acceleration, allowing a faster engine response and preventing the intermittent operation of the fuel supply system typical of low and medium displacement motorcycles. Ideal for both amateurs and pro users who prefer racing tracks.

Can be mixed in a concentration up to 5/6% without changing engine setting; above 6% we recommend increasing the fuel flow rate or adjusting the spark advance.

Twister Evo II application:

- 2-stroke and 4-stroke gasoline engines;
- Ideal for road, cross, endure or touring motorcycles;
- Also suitable for mini-motorbikes, scooter and kart;
- Engine coolant;
- Reduced fuel consumption;
- Enhanced power efficiency of your engine;
- Increased torque at low rev;
- High efficiency of the fuel supply system thanks to its cleansing action.

One bottle of Twister Evo II in 10/20 liters.

Twister Evo II is sold in 500 ml. format bottle.
