

Diesel Power

For a cleaner and shinier diesel engine

Directly from car racing comes DIESEL POWER, the product designed to increase the performance of diesel engines on the road (and not) while respecting the environment.

Diesel engines in all of their configurations (Multijet, DI, IDI, Common Rail, JTD, etc.) are more and more popular thanks to their higher performance and lower consumption, which are promoting their use not only on regular traffic roads, but also in car racing and rallies.

DIESEL POWER by Magigas Extreme Competition is designed to satisfy both sporty drivers and people who drive thousand km a year: in fact, its formulation guarantees improved performances thanks to its high number of cetane and to its oxygenating components that ensure a faster acceleration and a better top speed. DIESEL POWER has also a special detergent base, ideal to clean injectors and unclog pumps, with remarkable foam and corrosion inhibiting properties.

Moreover, Diesel Power prevents the diesel fuel and its filter from freezing, making it easier to start the engine even in very cold weather conditions. Another direct consequence of the overall burning improvement is represented by the significant reduction of fuel consumption and of particulate emissions, carbon monoxide and nitric oxide; this is a very important factor, especially for engines that have run many miles. It is enough to repeat the treatment every 2-3,000 km to keep at the top of its efficiency the fuel supply system and the components relevant to the engine combustion for its entire life, at a cost per mile that is a real bargain!

FOR AN IMPROVED PERFORMANCE:

One can in a full diesel tank (40/60 liters). For extreme performances, add up to 2 cans to a full tank.

FOR MAINTENANCE:

One can of Diesel Power in a full tank every 2-3000 km keeps the system in mint conditions. In a higher concentration, it is ideal to unclog pumps and reduce exhaust fumes even more.

Diesel Power is sold to the public in 500 ml cans.
