

Hyper Flame

New energy for your engine!

Hyper Flame is a gasoline additive that is the result of our experience in car racing, recommended for racing and capable, when blended with green gasoline, to ensure outstanding performances.

Hyper Flame is the ultimate stage of evolution before entering the sector of special fuels. It ensures a chemical boost, adding grit and power to the engine in every driving condition, as well as an increase of the torque and of the maximum power.

Thanks to its specific formulation that requires the use of special oxygenating components to favor the volumetric fill and increase the flame speed in the combustion chamber, HYPER FLAME produces Ron octane according to the percentage of product used.

To get these benefits, we recommend following the instructions here below:

How to use it:

- Use at 4-5% with Magigas special fuels, and at 2-3% blended with traditional fuels.
- To use with traditional fuels in a dosage higher than that recommended, add ½ liter of the new Superformula GT for every liter of Hyper Flame. Over 5%, we recommend increasing the fuel flow rate or adjusting the spark advance to offset the significant burning rate caused by the special hydrocarbons present in the product.
- In vintage cars and bikes, we recommend using ½ liter of the new New Age for every liter of Hyper Flame.

The action of Hyper Flame causes a significant increase of both torque values and maximum power values, enabling the engine to perform at higher rev-rates in every condition of use.

Added to a standard gasoline, Hyper Flame gives the engine grit and power in every condition and increases the octane number of the gasoline.

Specifically designed for racing, HYPER FLAME is ideal for those who want the top.

Outstanding with every engine, both 4-stroke and 2-stroke (scooters, cross, karts, etc.), and even with small displacement engines (50cc).

APPLICATIONS:

Recommended for all racing CARS and BIKES.

- A great increase of power in every driving condition;
- Increase of the octane number

Superformula HYPER FLAME is sold in 500 ml cans.
