

# Superformula GT

## Detonation resistant and oxygenating additive for 2-stroke and 4-stroke engines

Superformula GT is the specific “OCTANE SPECIALIST” additive for high-performance cars and bikes, created in the MAGIGAS Extreme Competition labs for all performance lovers that also care about their engines.

Superformula GT is the additive for those who really want to rev up and “live” the motor world with enthusiasm, dreaming the feeling of a true Super Sport car.

Superformula GT, in fact, is designed just for those GT cars that often see their performance reduced by a gasoline lacking enough properties or that, even with the use of performing fuels, could give even more with the right “vitamins”.

One can in the fill gives the fuel all those chemical and physical properties that are indispensable for a correct operation of the engine, with clear benefits for their performance, but also, and this is really important, for the engine life.

The high octane contribution allows using 100% of the engine power; often, original engines are mapped by car manufacturers to run with a high octane rate fuel.

### APPLICATIONS:

- For 2-stroke and 4-stroke gasoline engines;
- For turbo and multivalve engines;
- For ALL cars and bikes
  
- Increased octane number;
- Eliminates pinging;
- Reduced fuel consumption;
- Enhances the power properties of your engine
- Gives more torque at low revs;
- Keeps the fuel injection system efficient thanks to its cleansing power

Superformula GT is sold in 250 ml cans
